Max Shapira

SOFTWARE DEVELOPER - MOBILE & FULL-STACK

itsjustmax9@gmail.com | linkedin.com/in/maximshapira | github.com/JustMax7CB | maxshapira.dev | Israel

PROFESSIONAL SUMMARY

Software Developer building production mobile apps, the web around them, and the backend underneath. Flutter and native Android (Kotlin) / iOS (Swift) on the client, .NET, Python and Firebase on the server, and the CI/CD that ships them. Currently developing and maintaining three citizen-facing apps for a major Israeli municipality, the largest at **~100k monthly active users**. Strong in Clean Architecture, BLoC state management and Dependency Injection, with deep hands-on work in deep linking, Azure AD B2C authentication across WebView and native contexts, and end-to-end Google Play and App Store release management.

CORE COMPETENCIES

Flutter / Dart | Native Android (Kotlin) | iOS (Swift) | Deep Linking (App Links / Universal Links) | Azure AD B2C / OAuth PKCE | .NET & Firebase Backends | CI/CD (Codemagic, Azure DevOps) | Clean Architecture & BLoC

WORK EXPERIENCE

One Digital

Apr 2025 - Present

Software Developer

Five-person team building and running the citizen-facing apps of the Tel Aviv Municipality.

- Develop and maintain three production Flutter apps (mobile + Flutter Web from a shared codebase), the largest at **~100k monthly active users** and the others at ~60k.
- Led the migration from Firebase Dynamic Links to **Branch.io** across all three apps: vendor research, plan selection, and a coordinated joint release, since each app deep-links into the others.
- Built native deep linking end to end: Android App Links and iOS Universal Links (assetlinks.json / AASA), deferred links, and a stream-based link manager that resolves cold-start race conditions.
- Integrated **Azure AD B2C** authentication across Flutter native and WebView contexts (PKCE, silent re-auth, JS-bridge logout), and shipped OTP autofill across web and mobile with the client's identity team.
- Implemented secure cross-app session sharing on Android with AccountManager and Google Tink (AES-256-GCM) behind a signature-protected ContentProvider; rolled out Firebase App Check across build flavors.
- Reduced the Flutter Web app's initial load time by **~60%** by serving platform-dependent assets, loading CanvasKit from Google's CDN instead of bundling it, and parallelizing API calls.
- Own the release pipeline: Codemagic and Azure DevOps builds and signing, multi-flavor production and staging configurations (Gradle product flavors, buildConfigField), Firebase App Distribution, and publishing to Google Play and App Store Connect.
- Backend work on .NET services with Azure Cache for Redis and Key Vault, a Typesense search integration over a production Firestore dataset, and Python Firebase Functions; part of the on-call rotation for production incidents.

Triosoft Ltd

Jun 2023 - Apr 2025

Software Developer

Software house delivering mobile products for hardware and medical-device clients.

- Built the Flutter companion app for an FDA-approved medical smartwatch, streaming and synchronizing real-time biometric data over BLE, plus an experimental native Java version to evaluate platform trade-offs.
- Took over and owned a driver-monitoring (DMS) camera-calibration app, leading its migration from Xamarin.Forms to .NET MAUI with stable video streaming via LibVLCSharp and seamless LTE / Wi-Fi switching.
- Developed an iOS diabetes-management POC using LoopKit, implementing low-level BLE and NFC packet communication for custom hardware control.
- Developed iOS UI and Bluetooth Low Energy integration for a line of connected aquarium accessories.

PROJECTS

Consumption-113 Active | in use

Secure field-logging web app for a defense unit: crews submit reports from their phones and get formatted summaries shareable via WhatsApp and Telegram. Every entry is encrypted server-side with AES-256-GCM; serverless API on Vercel with CI/CD auto-deploys.

JavaScript, Vercel Functions, Node crypto, GitHub API

Gluc Safe B.Sc. final project

Flutter app for people with type 1 diabetes: glucose, meal and workout logging, bolus calculator, medication reminders, charts, and PDF export of history for healthcare providers.

Flutter, Firebase, Cloud Firestore, FCM

The Art of Deep Linking: What Most Guides Don't Tell You Article | Medium

How App Links and Universal Links actually work: the .well-known files, how to validate them, why servers silently break them, and when Android and iOS re-verify.

EDUCATION

B.Sc. Software Engineering Sami Shamoon College of Engineering 2019 - 2023

CERTIFICATIONS

Full-Stack Developer	TESI - The External Studies Institute	
Dart & Flutter: The Complete Flutter Development Course	Udemy	2022

SKILLS

Mobile: Flutter / Dart, BLoC | Cubit | Provider, Kotlin, Swift / SwiftUI, Java, .NET MAUI, BLE / NFC

Web: JavaScript, React, Next.js, HTML, CSS

Backend & Cloud: .NET, Python, Node.js, SQL / SQL Server, Firebase, Azure AD B2C, Redis, Typesense, IIS

Delivery: Codemagic, Azure DevOps, Google Play & App Store Connect, Git | Bitbucket | GitLab, Crashlytics, Jira | Agile, Unit testing

Languages: Hebrew (native), Russian (native), English (professional)
